

# Apple 2019 MacBook Pro (16-inch/40.65 cm, 16GB RAM, 512GB Storage, 2.6GHz 9th Gen Intel Core i7) - Silver

**Brand:** Apple

**Model Name:** Apple MacBook Pro (16-inch, 16GB RAM, 512GB Storage) - Silver

**Screen Size:** 16 Inches

**Colour:** Silver

**CPU Model:** Core i7

**RAM Memory Installed Size:** 16 GB

**Operating System:** Intel Core i7

**Special Feature:** anti reflective

**Graphics Card Description:** Dedicated

**Graphics Coprocessor:** integrated

## About this item

- Ninth-generation 6-core Intel Core i7 processor
- Stunning 40.65cm (16-inch) Retina display with True Tone technology
- Touch Bar and Touch ID
- AMD Radeon Pro 5300M graphics with GDDR6 memory
- Ultrafast SSD
- Intel UHD Graphics 630
- Six-speaker system with force-cancelling woofers
- Four Thunderbolt 3 (USB-C) ports
- Up to 11 hours of battery life
- 802.11ac Wi-Fi

## Technical Details

Apple MacBook Pro 16-inch with TouchBar  
and Touch ID

**Display**

16.0-inch (diagonal) LED-backlit display with IPS technology; 3072x1920 native resolution at 226 pixels per inch with support for millions of colors

---

**A gold class sound!!!**

Reviewed in India on 30 November 2020

**Verified Purchase**

You can find hundreds of technical reviews elsewhere in internet and know what apple is offering. Following is my opinion as a daily user - for past 8 months. I can't place this really on my lap during summer; can't rest palms near mouse pad while typing either. You can feel the heat all over, I guess due to the metal body. It's cool to work in AC; outside other than summer time, etc!! What really fascinated me is a gold class sound it produces, which can't be compared to any other laptop's sound I've ever heard. I love watching movies in it (music too) and I just wish if apple made a generic purpose sound bar/subwoofer with that kind of sound quality.

**Functionality should be checked before buying. Few product may have technical glitches.**

Reviewed in India on 8 May 2021

### Verified Purchase

When I open pdf file its becomes extremely hot within 3-5 minutes to an extent that it cant be touched, fans start running at their full speed making huge noise and battery start draining very fast, may drain from 100% to less than 20% within an hour.

This issue is with pdf files only not with others. I also did not get satisfactory response from customer care also to resolve the issue.

Otherwise smooth functioning.

**A great upgrade**

Reviewed in India on 26 January 2020

### Verified Purchase

Upgraded my mac book pro after 7 years. The older one 2013 model still runs and that epitomises the quality of the macbooks. Many a time I wanted to upgrade but the latest models were lacking in the quality that Apple is known for. Butterfly keyboard issues were well known.

However with the 16 inch mac book pro everything changed. They have gone back to their A-game. In India, they should have provided the customization options, I surely would have upgraded to 32 GB of RAM. The components are soldered and cannot be changed. "Bummer"

The speakers are wonderful and best on a laptop. The webcam is ordinary and old.

The performance is great and has no lag with the i9 processor. I am running VM's and my developer tools and see no problems. The trackpad is sweet...

The costliest MACbook in India, I guess, however feels like another 7 years association.

**Macbook Pro gives electric shocks while on charge- a common problem!!**

Reviewed in India on 23 July 2020

**Verified Purchase**

I recieved the Macbook Pro i9 mich before the promised delivery date and hence was delighted to receive it. Delivery was smooth. Packaging was excellent and I recieved the item in excellent condition. After one week of usage I observed that the MBP was giving electric shock if you touch the body while it was on charge. This shock ranged from mild tingling to at times alarming discomforting shocks. Initially, I thought it's just static but it was more than normal. I have never experienced similar thing in any of my laptops or electronics. I read the review online and was aghast to know that this problem is very common in MACBOOKS. Majority claimed that it was due to

two pin connector provided by the apple that does not have earthing. I got the electrical connection checked in my house for earthing- it was all normal. Soon I realised that whenever I touched the laptop ( even not on charge) barefoot while standing, I got this electrical sensation of tingling which vanished if I kept it on a metal box or wore slippers. Though this sensation was much smaller in comparison to when it is on charge with socket on. I complained to the Amazon and demanded for replacement. They told me that I have to register with the Apple customer care first who will generate a case Id based on my complaint and then they can process the request. I did the same. Experience with the Apple customer care was extremely good and positive. After they generated the case id and mailed it to me, I called up Amazon and they were kind enough to accept my request of replacement. They assured me that within 48 hours I will receive a mail stating time and day for the replacement and they would preferably try a hand to hand exchange. So far I am happy that my issue is being handled well. Let's hope it works out fine at the end. I will update you further when I receive the replacement.

**Best machine for a Developer**

Reviewed in India on 3 March 2020

**Verified Purchase**

I am a software developer, I started my mac journey in 2014 with a macbook pro 2014 model, got new mac pro in 2016 and now a fresh mac pro 16 inch in 2020, so far I have noticed a huge jump in this mac in terms of battery life, processing speed, my day to day job goes into compiling huge projects builds in Android Studio and Xcode, this machine has saved me hours of time in this process, Earlier mac used to heat up and I used to close everything except for the compilation process, but this mac can support multiple compilation at the same time.

One thing i missed in Indian version is they do not come with custom Ram upgrade from store, I would have gone for 32gigs.

**Great experience**

Reviewed in India on 6 May 2021

**Verified Purchase**

Pros

\* Build quality is fantastic.

\* Touch bar is amazing

Cons

\* Screen is very sensitive.

\* Fingerprint sense doesn't work properly sometimes.

\* Heat up too much, yes this Macbook heat up on low load also.

The rest of the pros and cons you already know or you can find on the internet. The above ones are unique.

**16" MBP - (REFER SECTION 2 for updated review - 15 months since purchase)**

Reviewed in India on 27 May 2020

**Verified Purchase**

I have written this review in 2 sections. Section 1 was written immediately after purchase in May 2020. Section 2 is written now in September 2021 after 15 months of usage.

Section 1 - May 2020:

You'll know if you need a 16" MBP. And, if you do, then do not hesitate in buying one! I purchased a maxed-out MBP (bear in mind that in India you cannot customize everything) last week and it has met all my expectations.

Pros:

1. The MBP combines fine performance with excellent battery life. Performance comes from the Intel Core i9 processors (8 cores and 16 threads in the maxed-out version). The improved thermal efficiency of this model helps sustain the performance. The 100Wh Li-polymer battery provides longer battery life. I found that it gave me 7-8 hours (upon moderately intensive usage: intermittent videos + music + browsing + documentation) easily always.

2. The screen is phenomenal with retina display and 500 nits of brightness. And at 16" it is amazingly immersive.

3. The scissor mechanism behind the magic keyboard is wonderful. I do not (and did not) like the butterfly keyboard in previous models and for me, this magic keyboard layout has improved workflow efficiency. Also, the 'ESC' key and the 'power' button are separate from the touch bar.

4. Sound from the speakers (6-speaker system) is superb. It is easily the best amongst any laptop models out there.

5. 1 TB of SSD ROM is sufficient and according to me, future-proof as well.

Cons:

1. This model comes with 4 USB-C slots and a 3.5mm headphone jack only and I wish there were the following: an SD-card reader and a USB 3.0 slot.

2. If I have to nitpick then I would have preferred a better FaceTime camera in this model. Don't get me wrong: the camera is good but not as exemplary as the other features/components of this laptop are.

Section 2 - September 2021:

The laptop stopped functioning one fine morning - just like that - and I had to take it to the service center. The executives there informed me that the Main Logic Board has become faulty and they'll need to replace that before continuing their diagnosis of the problem. The MLB for the 16" MBP costs about 60000 INR (now). Diagnosis also confirmed that the problem was not user-based - as in there was no liquid damage neither was there any other form of wear and tear. Further diagnosis is also required to determine if other components (HDD/Fan/ etc.) also need to be replaced. This will in all probability drive up the cost to fix the machine to around 100000 INR. As I had not purchased Apple Care + and also because the 1 year warranty period just got over, I'm right now in a difficult position. It looks like this particular item that was supplied to me had a defect that manifested - unfortunately for me - immediately after the warranty period.

Last year (in May 2020) I gave the seller a 5-star rating. However, I'm back now to change that to a 1-star rating which is more apt. I'm left with an extremely expensive 16" MBP which is non-operational.

**Not a great laptop from Apple**

Reviewed in India on 2 January 2020

**Verified Purchase**

Writing this review after using for more than 8 months . Everything is very nice in performance except the below things

1. It's heating excessively with in 5 to 10 minutes of opening (just for playing a song in youtube with full volume the temperature is as high as 85 to 98 degrees)

2. charging is disintegrating very fast (in cases like when you are doing some work on something like AutoDesk & simultaneously if a browser is running --- only for 2 apps running charge disintegration shouldn't happen right)

3. some times it's beach-balling even it's having octa core & 16 GB RAM

**Overall a good choice for purchase in India**

Reviewed in India on 1 July 2020

**Verified Purchase**

I upgraded to this Macbook for my video editing, coding and multitasking requirements. It has been 2 months and has been working fine for me apart from 1-2 issues. My Macbook does not recognise Keyboard and trackpad sometimes after waking up from sleep, but pressing the power button once solves the issue. I recommend using this Macbook with a laptop stand that reduced the over heating of the laptop sometimes.
